

# INART 258 Lab 3

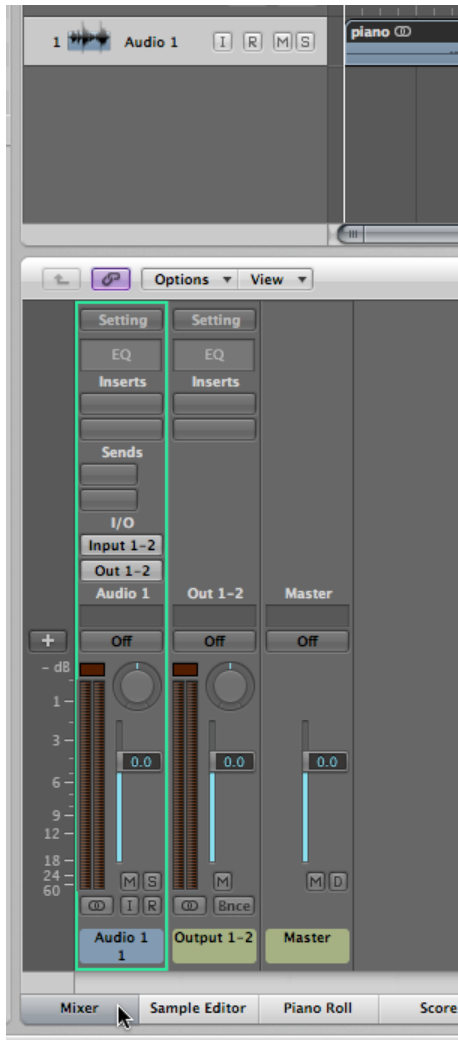

## Basic Filtering in Logic with an Insert Effect

Download the file **piano.aif** from the Assignments page.

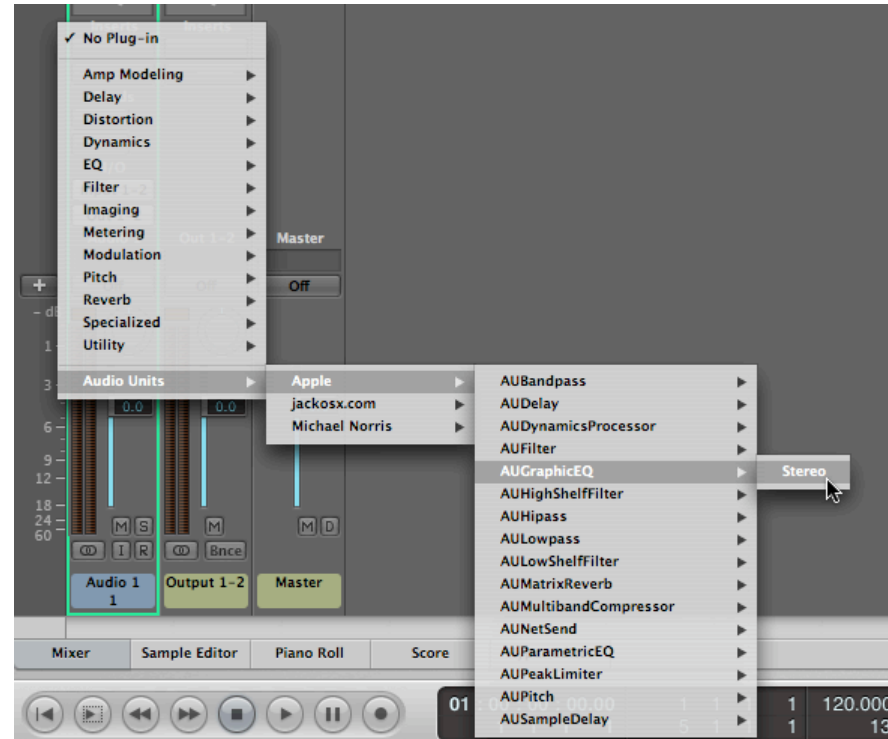

Create a Logic Express project and import this file via the Audio Bin, as in Lab 2.

There should be one audio track only, holding this file.

Click the **Mixer** button. A mixer channel strip will appear for the lone audio track. (Ignore the tracks Output 1-2 and Master for now.)

Click and hold one of the track's Inserts menus, and navigate to **Audio Units -> Apple -> AUGraphicEQ -> Stereo**

Use the graphic equalizer to filter the recording. Be sure it is set for 31 bands. Try to clean it up, eliminating noise but maintaining the character of the piano.
